UFUQ Science & Technology Fest

Calicut is set to witness a festival that brings science, technology, and society into critical conversation. UFUQ - Science and Technology Fest aims to make an academic mark within the community and popular culture by exploring how rapid advancements—from Artificial Intelligence to renewable energy—are reshaping our social world.

This fest gathers students, researchers, and the wider academic community to reflect on the role of science and technology in social good. Beyond mainstream narratives, we highlight alternative knowledge traditions that champion social justice and inclusivity. The festival will bring together students, faculty, and experts from diverse scientific and technological disciplines, including national and international guests.

We will be celebrating the contributions of Muslim scholars and civilizations to foundational innovations in science and technology. What made their approach distinct from today's science communities? How can we learn from that legacy of knowledge, ethics, and public good?

At the same time, we critically examine how modern scientific and technological developments—while promising—can also marginalize communities and serve as instruments of oppression.

The festival will feature

UFUQ - Science and Technology Fest is a celebration and a space to rethink, critique, and reimagine the role of science and technology in building a just future.

Philosophy of Science

To critically explore the genealogy and conceptual foundations of scientific rationality, examining its societal function as embodying a particular dynamic of knowledge, power, and reality.

Politics of Science

To critically engage with the sociopolitical implications of science and technology, challenging the myth of their neutrality and highlighting their roles in reinforcing ideologies and systems of control.

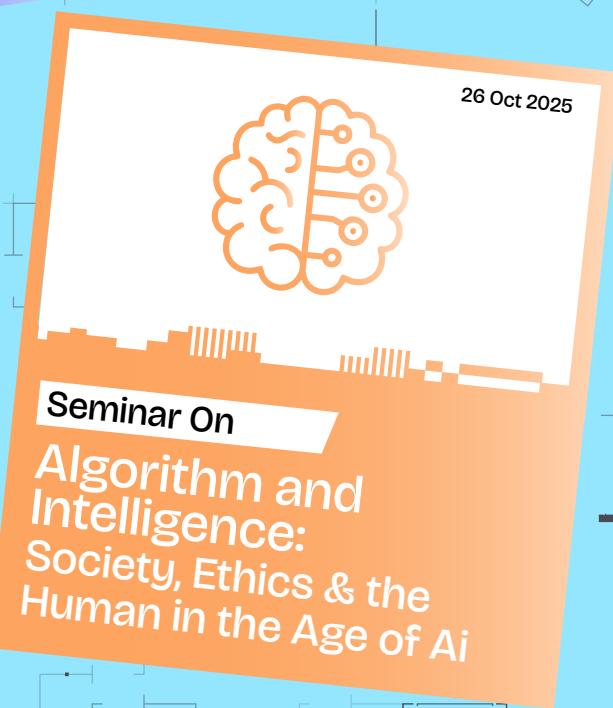

Interdisciplinary Method

To pave the way for interdisciplinary and transdisciplinary dialogue that ensures the sustenance of values in the further development of science and technology.

Islamic Civilizational Imagination

To envision the possibility of engaging with science and technology from within an Islamic civilizational imagination, to foster a just and prosperous world order.

Pre Events

Hackathon for Social Good

The Hackathon for Social Good is more than just a competition; it is a movement to align science and technology with values. Organized by SIO Kerala as part of its UFUQ Science & Technology Fest, this initiative seeks to inspire young minds to innovate responsibly and with justice.

In a world where science and technology often drive inequality and oppression, this hackathon calls on students, researchers, and changemakers to reimagine science and technology as tools of empowerment. In this hackathon, participants will shape innovations that serve humanity and uphold justice. Through collaboration, mentorship, and creativity, we aim to nurture a new generation of innovators who are rooted in values, social good, and justice.
